

Air Quality Community of Research Inaugural Meeting Survey

What sector best fits your organisation?

How often would you like the community of research to meet?

What are your hopes for this community? How can you contribute?

My research focuses on indoor and outdoor air pollution in particular built environment intervention to mitigate the air pollution exposure. I hope to connect with other researchers and policy makers.

Networking, awareness of the field, opportunities. I could contribute a social science perspective and qualitative methodological expertise.

Researching how cultural practices and user behaviour affect indoor air quality, focusing on cooking in UK minority communities using mixed methods approaches.

Collaborative opportunities. Indication of research strengths and needs.

Understand air quality issues that affect Wales. How can these issues be addressed locally, regionally, nationally and internationally.

Interdisciplinary approaches, broad based to allow for big picture thinking

Learning from each other and networking / collaboration opportunities.

Collaboration opportunities and hearing from people with different expertise and disciplines

What are your hopes for this community? How can you contribute?

Sharing knowledge of new research projects and opportunities, as well as understanding policy directions of travel.

Methodological and academic expertise extremely valuable for collaboration and richer thinking about the topic

How would you prefer to meet?

What is your preferred focus for our next meeting?
